5COSC019C Object Oriented Programming – Coursework (2025/26)	
Module leader	Guhanathan P
Unit	Lab-based Practical
Weighting:	50%
Qualifying mark	30%
Description	Object Oriented Programming and Design
Learning Outcomes Covered in this Assignment:	This assignment contributes towards the following Learning Outcomes (LOs): LO2 Acquired detailed knowledge of concepts of object-oriented programming and apply characteristics, tools and environments to adapt to new computational environments and programming languages which are based on object-oriented principles within a time constraint; LO3 Design and implement applications based on an object-oriented programming language, given a set of functional requirements. Use APIs which have not been exposed to previously, in order to develop an application requiring specialised functionality; LO4 Design and implement graphical interfaces using an object-oriented programming language; LO5 Apply appropriate techniques for evaluation and testing and adapt the performance accordingly.
Handed Out:	Java system handed out 10 days before the test
Due Date	Test on 8th of July – Referral/Deferral session
Expected deliverables	Submit on Blackboard a zip file containing: a folder with the developed project (NetBeans solution with your Java code).
Method of Submission:	Electronic submission on BB via a provided link close to the submission time.
Type of Feedback and Due Date:	Written individual feedback within 15 working days. All marks will remain provisional until formally agreed by an Assessment Board.

Lab-based practical – 5COSC019C Object Oriented Programming

The Java-based system below, which manages the day-to-day operations of a health centre, is made available to students. Students are given roughly ten days to read, run and analyse the project, and are expected to become thoroughly familiar with the supplied code and the classes that have been implemented. The system is distributed as a NetBeans project and contains the following classes:

- **HealtCentreCoursework_5COSC019W.java** (the **main()** method is here)
- **StaffMember.java**

- **Doctor.java**
- **Receptionist.java**
- **WestminsterHealthCentreManager.java**
- **HealthCentreManager.java**
- **StaffTableGUI.java**
- **StaffTableModel.java**

The project files are attached in a zip folder.

The system is represented in the UML class diagram provided below in this specification. The UML class diagram may be used by the student as a reference and a map of the system.

In this lab-based practical assessment, your task is to extend the functionality of this Java project by writing additional Java code.

Instruction before you start

- Unzip the folder and open the project in NetBeans.
- Once it is open, locate the **HealthCentreCoursework_5COSC019W** class and, in the comments section at the top of the file, add your first name, last name and student ID.

Instruction for the submission

- Zip the whole NetBeans project and submit the zip file.
- On Blackboard, indicate which tasks have been attempted and which have not.
- Double-check that the file you submitted is correct and contains all of the Java files.

During the test:

- Students are allowed to access the module material on Blackboard and to use books or notes.
- Students are required to keep only one tab open in their web browser, used specifically for accessing the Blackboard (BB) platform. No additional tabs or windows should be open for any reason.
- Students are prohibited from accessing any external websites, resources or online tools outside of the Blackboard platform during the test period. This includes:
 - **Educational websites** (e.g. Wikipedia, Khan Academy)
 - **Search engines** (e.g. Google, Bing, Yahoo)
 - **Communication platforms** (e.g. Discord, WhatsApp, social media, email)
 - **Generative AI tools** (e.g. ChatGPT, DALL·E, Bard, or any other AI-based content-generation tools)
 - **Other online resources** (e.g. calculators, note-sharing sites, coding forums, or any similar platforms)
- Any detected access to unauthorised sites, generative AI tools or materials may result in the termination of the test or in penalties in line with academic integrity policies.
